

EVERGREEN FABRICS

TEXTILES THAT RESPECT PEOPLE & THE ENVIRONMENT

The EverGreen Fabrics collection was created in 2003 by Saint Clair Textiles, demonstrating the company's active commitment to respecting people and the environment. EverGreen products are designed for digital printing, meeting the very specific needs of two demanding markets: marketing communications and decorative wall coverings.

1/ ECOLOGICAL ADVANTAGES

EverGreen Fabrics are made in France in our ISO 9001-14001 certified plant at La Tour du Pin, located in the Isère region.

Our textiles are designed and manufactured to be ecologically friendly and to reduce the environmental impact of all our production processes throughout the product lifecycle, from creation through to destruction.

Evergreen Fabrics are made from a polyester base with a water-based coating.

They are systematically certified :

PVC-free

Phtalate-free

Formaldehyde-free

Phosphate-free

Glycol ether-free

The environmental features of EverGreen Fabrics have been validated by life cycle analyses (LCA) complying with ISO 14 040 – 14 044 standards.

After use, the textiles are destroyed locally, either by incineration or in landfills.

2// RESPECTING HUMAN HEALTH

EverGreen Fabrics do not release any toxic or carcinogenic components and do not emit any VOCs (Volatile Organic Compounds).

Their non-toxic characteristics and concern for the protection of human health are recognized with the award of the following certifications :

This label certifies that the fabrics do not release any toxic substances and do not present any risks to human health and skin.

This label tests the fabrics for VOC emissions according to the legal requirements concerning the labelling of construction products or wall coverings. It relates to their emission of volatile pollutants on a scale of 4 levels from A+ (low emissions) to C (strong emissions)

This US standard is designed to define low-emitting materials suitable for environments where people, particularly children and sensitive adults, spend extended periods of time, in particular schools and healthcare facilities.

This norm certifies the low migration of dangerous substances and allows their use in children's environments (nurseries / schools / hospitals ... etc.)

3/// AESTHETIC AND TECHNICAL ADVANTAGES

EverGreen Fabrics all benefit from a satin-matte finish, which enhances printed colors and contrasts, without creating shine.

These products are perfect for all indoor applications, including the creation of sophisticated lighting effects.

The grain of the fabric, together with a variety of specific finishes, are perfect for creating warmth and luxury. The products are flexible and lightweight (from 180 g/m² to 390 g/m² depending on the model) and are easy to transport, handle and install.

The EverGreen Fabrics collection can be used in interior design for wallcoverings, and as a marketing communication vector for the exterior, as well as the interior (point-of-sale, window displays, advertising, signage...etc).

COLLECTION
EVERGREEN

PRODUCT APPLICATIONS	PERSONALIZED WALL DECORATION	INDOOR ADVERTISING	OUTDOOR ADVERTISING
